**INTERNATIONAL PRELIMINARY  
REPORT ON PATENTABILITY  
(SEPARATE SHEET)**

International application No.

PCT/ES2004/070053

**SECTION V-----**

Presently claimed subject-matter seems to be novel and inventive since the successful combination of dimerization domains and the E.coli alpha hemolysin transporter system to prepare dimeric proteins is neither taught nor suggested in the available prior art. Hence, present claims meet the requirements of Art. 33(2)(3) PCT.

**SECTION VIII-----**

- 1). Present application only demonstrates that the attachment of the dimerization domain at the N-terminal end of HlyA allows a successful production of a dimeric product. Correspondingly, this specific arrangement seems to be an essential feature of presently claimed subject-matter and thus should be mentioned in the independent claims to meet the requirements of Art. 6 PCT.
- 2). The terms "homologous" and "natural or artificial variant of HlyA" render the scope of claims containing said expression unclear. (Art. 6 PCT). This is particularly true in view of the fact that no functional requirement which should be met by the variant or the homolog is given in the claims containing said expressions.
- 3). Finally, the expression "product of interest" is deemed unduly broad. At least it should be a product suitable for dimerization.
